

MANAN PATEL

Software Engineer | Applied AI & Machine Learning
manan.patel@outlook.com | mananpatel.info

1 Summary

Senior Software Engineer with 8+ years building production mobile and software applications serving millions of users across government, fintech, and startup environments. Expert in iOS development (Swift, SwiftUI, UIKit), cross-platform development (React Native), and full-stack engineering. Academic background in Statistical Machine Learning including neural networks, backpropagation, multivariate analysis, and statistical inference. Proven track record in team leadership, product management, and agile development.

2 Professional Experience

Rocket Agency

AI Deployment Strategist

Calgary, AB (Hybrid)

August 2025 – Present

- Built, deployed, and operate production voice and chat LLM agents for SMB clients, autonomously resolving 60% of inbound call and support ticket volume (real estate bookings, restaurant reservations)
- Shipped AI agent systems across client SaaS stacks including Zendesk, Gorgias, HubSpot, Monday.com, and Shopify, automating support triage, sales follow-up, and order workflows via REST APIs and webhooks
- Own the full deployment lifecycle: agent design, tool and API integration, rollout to live customer traffic, and ongoing monitoring of resolution and escalation rates

Environment and Climate Change Canada

Software Engineer (iOS & Full Stack)

Calgary, AB (Remote)

March 2023 – Present

- Engineer for WeatherCAN, the #3 weather app in Canada, serving 5M+ monthly active users
- Lead a team of 4 engineers delivering weather dissemination modernization KPIs across Weather.gc.ca, iOS, and Android
- Build features against real-time weather services, including GPS severe-weather alerting with radar, lightning, and tornado tracking
- Drive CI/CD, automated testing, and code review standards across the team

RentPlay

Co-Founder & Chief Technology Officer

Calgary, AB

January 2025 – September 2025

- Primary developer of the RentPlay website, web app, and mobile apps: rent reporting, local merchant rewards, and receipt-to-cash redemption
- Built a receipt OCR pipeline plus a compliant application layer spanning financial authorization, transactions, location-based notifications, and two-sided marketplace matching
- Architected the platform on React Native, Node.js (Express), and TypeScript with MongoDB, PostgreSQL, and CI/CD; scaled to 1,000+ users and 100 merchants

Wattpad

iOS Engineer

Toronto, ON (Remote)

August 2021 – March 2023

- Lead engineer for the new Wattpad Comments experience on an app serving 90M+ users, delivering a 300% engagement increase
- Managed bi-monthly releases at 99.9% crash-free rate; conducted 100+ code reviews enforcing quality standards

TD
iOS Developer

Toronto, ON (Hybrid)
January 2020 – August 2021

- Built app features for account management, fund transfers, and transaction history
- Integrated financial APIs with multi-factor authentication and PCI-DSS controls; wrote test suites covering critical transaction flows

Environment and Climate Change Canada
Full Stack Developer

Toronto, ON
May 2017 – January 2020

- Led WeatherCAN from discovery through launch, reaching 1M+ users within the first year
- Built REST APIs serving 10M+ monthly calls with Python and Node.js backend services
- Built XML/JSON parsing pipelines processing 50,000+ daily weather updates with automated testing and CI/CD

University of Toronto
Machine Learning Research Assistant (Internship)

Toronto, ON
September 2016 – December 2016

- Trained machine learning models in Python and R, including neural networks and random walk models
- Generated real-world inferences from model outputs on the economic impacts of foreign trade policies

3 Education

University of Toronto
Bachelor of Science, Computer Science & Statistical Machine Learning, Co-op

Toronto, ON
2014 – 2019

- Coursework: Statistical Machine Learning, Neural Networks, Deep Learning, Natural Language Processing, Computer Vision, Statistical Inference, Multivariate Analysis

4 Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, R, Swift, Objective-C, Java

Backend & Data: Node.js (Express/NestJS), Python (Django), REST APIs, GraphQL, microservices, real-time data pipelines

Databases: PostgreSQL, MongoDB, SQLite, Firebase, CloudKit, Core Data

Platforms & Integrations: Zendesk, Gorgias, HubSpot, Monday.com, Shopify, webhook & API orchestration

DevOps & Testing: Git, GitHub Actions, CI/CD Pipelines, Docker, Postman, unit & integration testing, TDD

Frontend & Mobile: React, Vue.js, React Native, Swift, SwiftUI, UIKit, HTML5, CSS3

5 Projects

Goal Getter – iOS Habit Tracker – 1,000+ MAU – Paying Subscribers

2025 – 2026

- Shipped a solo iOS app with CloudKit sync across iPhone, iPad, and Apple Watch, and in-app purchases converting at 3%

Countries Quiz – Interactive Geography App – 500+ MAU

2025

- Built custom MapKit rendering with 4 game modes and progressive difficulty
